

BOMBAY PETFOODS LTD

Applied Chemicals have been supplying our business with solutions for cleaning and sanitizing our plant for 8 + years and for the last 5 years, providing solutions for the treatment of our water supply. Backing this up, Applied are also our primary provider for staff training of chemical handling, cleaning and sanitation.

As New Zealands largest Fresh Meat petfood manufacturer and an operator of a registered RMP, it is critical to us that we have a reliable solution for cleaning and sanitation that gives a consistent result. That backed up with a program for training of the team (2 shifts, 29 production staff) and providing specification material and supporting process documentation has been invaluable.

Applied have continued to provide appropriate chemical and equipment solutions to meet with the growth of our business and plant and have backed this up with a level of servicing, technical advice and reporting that meets and exceeds the expectations of our team, RMP and verifiers.
